since its first experimental demonstration in 1999 coherent x ray diffractive imaging has become one of the most promising high resolution x ray imaging techniques using coherent radiation produced by brilliant synchrotron storage rings the ability to directly invert diffraction data with the help of advanced algorithms has paved the way for microscopic investigations and wave field analyses on the spatial scale of nanometres without the need for inefficient imaging lenses x ray phase contrast which is a measure of the electron density is an important contrast mode of soft biological specimens for the case of many dominant elements of soft biological matter the electron density can be converted into an effective mass density offering a unique quantitative information channel which may shed light on important questions such as dna compaction in the bacterial nucleoid through weighing with light in this work x ray phase contrast maps have been obtained from different biological samples by exploring different methods in particular the techniques ptychography and waveguide holographic imaging have been used to obtain twodimensional and three dimensional mass density maps on the single cell level of freeze dried cells of the bacteria deinococcus radiodurans bacillus subtilis and bacillus thuringiensis allowing for instance to estimate the dry weight of the bacterial genome in a near native state on top of this reciprocal space information from coherent small angle x ray scattering cellular nano diffraction of the fine structure of the bacterial cells has been recorded in a synergistic manner and has been analysed down to a resolution of about 2 3 nm exceeding current limits of direct imaging approaches furthermore the dynamic range of present detector technology being one of the major limiting factors of ptychographic phasing of farfield diffraction data has been significantly increased overcoming this problem for the case of the very intense x ray beam produced by kirkpatrick baez mirrors has been explored by using semi transparent central stops

three new chapters focus on the rapidly developing fields of archaeal and eukaryotic molecular biology biotechnology and immunology in host defense and disease page viii

includes a supplemental roster of state officers boards and commissions including federal boards and agencies operating in ohio for 1934

this is the first comprehensive overview of the development of the field of organizational behavior it belongs on the shelf of every scholar and student in the discipline part i covers the foundations of the scientific method theory development and the accrual of scientific knowledge in the field part ii

introduces the ideas of pioneers whose work pre dates the emergence of organizational behavior part iii considers the actual emergence of ob as we know it today with an analysis of the environmental forces that impinged upon it such as the recruiting of social scientists into business schools part iv presents an assessment of the current state of the art in ob research with an original assessment of the importance validity and practical usefulness of 73 core theories in ob finally part v sets forth a vision for the future identity and growth of organizational behavior research theory and practice
