this book is unique in describing the history of post war reconstruction from an entirely new perspective by focusing on the changing relationship between architects and building workers it considers individual as well as collective interactions with

technical change and in doing so brings together for the first time an extraordinary range of sources including technical archives oral history and visual material to describe the construction process both during and in the decades after the war it focuses on the social aspects of production and the changes in working life for architects and building workers with increasing industrialization in particular analysing the effect on the building process of introducing dimensionally co ordinated components both architects and building workers have been accused of creating a built environment now popularly discredited architects responsible for poor design and building workers for poor workmanship however many of the structures and ideas underpinning this period of rapid change were revolutionary in their commitment to a complete transformation of the building process an architecture of parts adds to the growing literature on changes in the building world during and immediately after the second world war it is significant both empirically and historically in its examination of the ideas technology and relationships that fired industrialization of the building process in mid century britain

one of the great challenges in ecophysiology is linking physiological measures in wild animal populations with changes in individual fitness physiological variables that indicate nutritional state stress disease or injury are used extensively in veterinary practice and captive settings to assess the health and likelihood of reproductive success of many animals the development and refinement of sampling methods that limit disturbance of animals coupled with advancements in analytical methods have allowed researchers to begin to examine the relevance of these physiological parameters in wild animals for predicting population trends and response to environmental perturbations however despite extensive research in this field consistent correlations between fitness and or population health and physiological measures remain rare
